## vitamin biosynthetic process

## vitamin metabolic process

lysosomal transport

cholesterol biosynthetic process

regulation of cholesterol efflux

protein localization to lysosome negative regulation of response to endoplasmic reticulum stress organic hydroxy compound biosynthetic process

protein targeting to lysosomeprimary alcohol catabolic process

lipid transport negative regulation of amyloid-beta formation hormone metabolic process

lipid homeostasis

hormone metabolic process

lipid localization

cell death in response to oxidative stress lipid catabolic process

regulation of lipid storage

pancreas development

mitotic DNA replication

regulation of fatty acid metabolic process

regulation of fatty acid beta-oxidation

negative regulation of peptidase activity

negative regulation of phosphorylation

organic anion transport

focal adhesion assembly peptidyl-tyrosine dephosphorylation involved in regulation of protein kinase, Besignaling

carboxylic acid transmembrane transport

regulation of focal adhesion assembly negative regulation of release of cytochrome c from mitochonomonosaccharide biosynthetic process regulation of cell-substrate junction assembly cellular response to inorganic substance dicarboxylic acid metabolic process

regulation of cell-substrate junction organization

organic cyclic compound catabolic process

aromatic amino acid family catabolic process response to nutrient

negative regulation of T cell receptor signaling pathway nucleoside catabolic process

deoxyribose phosphate catabolic process

transition metal ion transport
