## vitamin biosynthetic process

## vitamin metabolic process

## lysosomal transport.

protein localization to lysosome —negative regulation of response to endoplasmic reticulum stress cholesterol biosynthetic process protein targeting to lysosome alcohol catabolic process regulation of cholesterol efflux

negative regulation of amyloid-beta formation hormone metabolic process thyroid hormone metabolic process thyroid hormone metabolic process

mitotic DNA replication

lipid homeostasis

pancreas development

regulation of cell-substrate junction organization

regulation of lipid storage

negative regulation of peptidase activity

peptidyl-tyrosine dephosphorylation involved in inactivation of protein kinase activity focal adhesion assembly

regulation of protein kinase B signaling carboxylic acid transmembrane transport

regulation of focal adhesion assembly monosaccharide biosynthetic process negative regulation of phosphorylation of cytochrome c from mitochondria dicart

dicarboxylic acid metabolic process

regulation of cell-substrate junction assembly organic cyclic compound catabolic process

aromatic amino acid family catabolic process

deoxyribose phosphate catabolic process

transition metal ion transport

size
