vitamin biosynthetic process

vitamin metabolic process

lysosomal transport

cholesterol biosynthetic process

protein localization to lysosome negative regulation of response to endoplasmic reticulum stress organic hydroxy compound biosynthetic process

protein targeting to lysosomeprimary alcohol catabolic process

lipid transport negative regulation of amyloid-beta formation hormone metabolic process

regulation of cholesterol efflux

hormone metabolic process

lipid homeostasis lipid localization

cell death in response to oxidative stress lipid catabolic process regulation of lipid storage

regulation of fatty acid metabolic process pancreas development

carboxylic acid transmembrane transport

negative regulation of peptidase activity

regulation of cell-substrate junction organization

mitotic DNA replication

regulation of fatty acid beta-oxidation

negative regulation of phosphorylation focal adhesion assembly

organic anion transport

peptidyl-tyrosine dephosphorylation involved in inactivation of protein kinase B signaling monosaccharide biosynthetic process

regulation of fcnegative regulation of release of cytochrome c from mitochondria cellular response to morganic substance

dicarboxylic acid metabolic process

regulation of cell-substrate junction assembly

organic cyclic compound catabolic process

aromatic amino acid family catabolic process response to nutrient

negative regulation of T cell receptor signaling pathway nucleoside catabolic process

deoxyribose phosphate catabolic process

transition metal ion transport

size
