## vitamin biosynthetic process

## vitamin metabolic process

lysosomal transport

cholesterol biosynthetic process

protein localization to lysosome negative regulation of response to endoplasmic reticulum stress organic hydroxy compound biosynthetic process

protein targeting to lysosomeprimary alcohol catabolic process

negative regulation of amyloid-beta formation hormone metabolic process metabolic process regulation of cholesterol efflux

hormone metabolic process

lipid localization

mitotic DNA replication

cell death in response to oxidative stressification lipid catabolic process regulation of lipid storage

pancreas development regulation of fatty acid metabolic process

regulation of fatty acid metabolic process

negative regulation of peptidase activity

negative regulation of phosphorylation

organic anion transport

focal adhesion assembly regulation of protein kinase B signaling carboxylic acid transmembrane transport

regulation of fc0e9ative\_regulation of fc0e9at

cellular response to inorganic substance dicarboxylic acid metabolic process

regulation of cell-substrate junction organization organic cyclic compound catabolic process

aromatic amino acid family catabolic process

negative regulation of T cell receptor signaling pathway nucleoside catabolic process

deoxyribose phosphate catabolic process

transition metal ion transport
